# demonstration case

## What is a demonstration case?

Tunstall home unit demonstration cases are specifically designed to assist organisations in demonstrating to potential clients the range of home monitoring solutions available, and the benefits they can bring.

**There are two types of case, a Landline Case and a GSM Module Case**

- The Landline Case comprises a Lifeline 400 and a Lifeline 4000+ together with a full range of compatible sensors.
- The GSM Module Case includes the same solutions with the added benefit of a wireless telephone link. This enables the Lifeline home units to be programmed to a nominated response centre allowing demonstrations to take place when access to a standard telephone line is not possible.

## How does it work?

Once the Lifeline home unit has been connected to both mains power and telephone sockets, calls can be raised via the smart sensors or by pressing the red button on the Lifeline home units. This allows live demonstration calls to take place to the nominated response centre.

## Why is it needed?

The cases provide a professional demonstration facility that allows organisations to promote home monitoring solutions to people living in the community and to potential customers such as police forces, GPs and other health care professionals.

## Who is it for?

A demonstration case is the ideal solution for any organisation who wishes to promote the awareness of the service offered in the community. They provide a convenient and effective way of conducting presentations and participating in seminars and exhibitions.

All the reassurance you need

**Tunstall**

## Landline Demonstration Case includes:

- Lifeline 4000+ with display
- PIR
- Flood detector
- Carbon monoxide detector
- Wireless pull cord
- Gem+ trigger
- Lifeline 400
- Wireless smoke detector
- Temperature sensor
