telehealth solutions for supported self management

Tunstall MediCompass® and Tunstall MetrikLink®

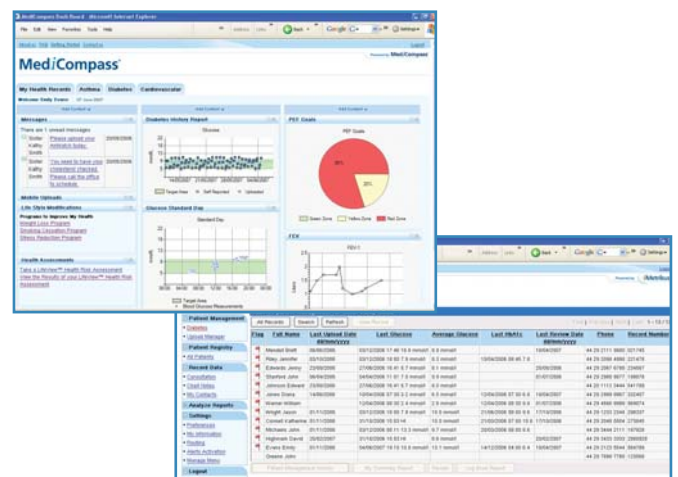

Tunstall's long term lower tier telehealth solutions offer a comprehensive way of managing patients conditions in their own homes, empowering patients to take ownership and responsibility for the control of their own health management. Tunstall's solutions enhance quality of life and allow professionals to deliver effective and personal case management in an ever increasing pressured environment.

What are the Tunstall MediCompass® and MediCompass® Pro

MediCompass® is an interactive, secure web-based personal health record that connects patients and healthcare professionals with powerful tools to help monitor healthcare conditions and facilitate communication amongst members of the care team. MediCompass® Pro enables healthcare professionals to track the health status of their patient population, while identifying key trends for individual patients. It also provides powerful tools to help professionals understand how their patients are progressing, and to prioritise those patients who need it most, and enables communication with patients between visits. MediCompass® software enhances the patient provider relationship by securely storing information on health events, medication compliance and activities between care visits, allowing more timely and effective management of chronic conditions such as asthma and diabetes.

Features and benefits:

- Secure online patient registry stores information on a central database allowing effective communication for increasingly complex integrated case management teams
- Encourages patient compliance with medication regimes and ownership of their condition by providing care professional with patient behaviour insights
- Provides patients and professionals with a customised personal health record, enabling them to track agreed healthcare goals and share information with authorised care professionals improving the delivery of their care plan between related agencies

All the reassurance you need

Tunstall Metriklink®

MetrikLink® is a universal connectivity tool that enables patients to gain better control of their conditions by uploading their vital sign self-testing data from over 35 personal health monitoring devices, including blood glucose, blood pressure and weighing devices, using a standard telephone line or Internet-enabled PC connection.

The results can be viewed using the MediCompass® health monitoring system. The MetrikLink® has a number of applications, a remote monitoring patient device designed for home use or a clinician owned product that can be used in a clinic or surgery setting for multiple clinician-patient reviews. The MetrikLink® (home monitoring) is supplied with one adaptor for medical devices and a telephone line cord whereas the MetrikLink® Pro is designed for use in a clinician's office and is supplied with 10 different adaptors to fit a wider range of devices and a serial adaptor to connect to the clinicians PC.

MetrikLink features and benefits

- The versatility allows links to over 20 different personal health monitoring devices ranging from blood glucose monitors and blood pressure cuffs to weighing scales
- Designed with simplicity in mind. Patient feedback suggests that the MetrikLink® is simple and easy to use on a daily basis.
- Seamlessly and reliably transmits data quickly and safely via a secure phone line or PC modem connection
- Motivates and improves self management and compliance by facilitating engagement and ownership, putting patients in charge of their own condition
- Provides solutions for both home patient monitoring and multiple use in a clinical setting
- Fully secure patient confidentially
- Compact, portable and easy to use
- Electrically isolated for patient safety

Summary of benefits for patients and health professionals

For patients:

- Motivates self-management and compliance
- Facilities ownership and responsibility of their condition
- Increases self confidence by reassuring patients that their condition is being monitored between visits
- Increases patient health education and knowledge by allowing access to relevant healthcare information and trend data
- Ensures proactive care is received and can reduce the length of stay in hospital

For health professionals:

- Allows personalised proactive care even with mounting case loads and increased pressures
- Creates individualised follow-up reports to encourage patient ownership and responsibility
- Allows multiple trending capabilities to asses patient trends across the patient population
- Enables prioritisation of patient case loads based on individual patient alerts from predefined patient parameters
- Produces accurate strip utilisation reports for any patient by meter type
- Eliminates the problems of error-prone manual logs and journals
